**Its SPINNING and not DRYING !**

Sept. 4, 2007

We have installed 8 washing machines at some places selected randomly.

1. DO NOT Overload the spinner.
2. SPINNER IS 'SPINNER'. IT IS NOT DRIER. (ASK YOUR PARENTS).
3. THE SPINNER is supposed to dry the cloths upto 75% (with some hot blow). If you run the spinner for 2 minutes or 10 minutes, its not going to change the percentage of drying drastically.  
In contrast, when you run it for a long, you are using the heat of the spinner to heat the motor also. The motor has a thermostat; it will stop, if it finds the working temperature more than it should work at.
4. Please check that there are no COINS in the cloths before placing in the machines.

*Therefore, dry the cloths in air after you spin for a minute or two.*

*Take it granted for me, if you do not listen to this, your spinner will go bad almost immediately.*
